

New, technology-driven worker safety and productivity program.

Help protect your overall business performance and at the same time clearly show your commitment to employee safety. Combining consultative services with data collection, motion sensing and environmental quality monitoring technologies, our Worker Safety and Productivity Program supports optimal work environments, employee safety and consistent operational effectiveness.

Stay Informed.

Spot work-related risks that can easily be missed.

Inspire Safety.

Change employee behaviors to decrease the chance of injury.

Support Profitability.

Avoid added labor expenses and sustain high productivity.

Program Elements

Manage risk, optimize productivity and improve operating results.

- Risk assessments – Comprehensive onsite safety assessments including a technology evaluation and benchmarking vs. best-in-class for the industry
- Safety and productivity insights – Recommendations for process improvements, risk controls, and advanced diagnostic and monitoring technology
- Emerging technology adoption assistance – Procurement, deployment and onboarding services to allow for testing and seamless implementation of emerging safety technology. Includes preferred, pre-negotiated pricing with partnered tech vendors
- Improved return-to-work results – Industry-leading

workers' compensation coverage and claims service

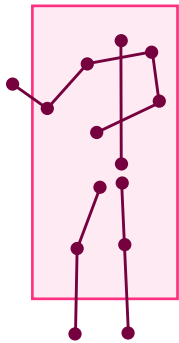

- Actionable information – Ongoing analysis and delivery of data-driven insights from diagnostic technology
 - » Real-time risk measurements, alerts, coaching and feedback to employees and managers
 - » Benchmarks and trending of systemic risk factors and risk/cost-reduction opportunities
 - » Asset use and comparison of productivity vs. safety investment ROI decisions
- Financial benefits – Potential preferred insurance pricing and loss-sensitive profit-share programs with investment in best-in-class safety practices and technology

Worker Safety Technology Options

Imagery/computer vision software

Analyzes customer video from existing fixed cameras in their facility and focuses on a broad view of exposures.

Risk Applications

- Ergonomics (manual material handling, awkward postures)
- Powered Equipment Operation (traffic patterns, blades up, line of sight, speeding, seat belt, load fall hazard, quick turn, collisions/near miss)
- Slip/Trip/Fall (housekeeping, jumping/climbing, obstructed vision, unprotected leading edges, floor maintenance, ladders/lifts, spills)
- Caught In (machine guarding/worker exclusion, pin hazards, pinch points)

Case Study – Shipping facility

- Computer vision detected 2,182 jumping and climbing events over a two-month period

- Heat mapping showed that 80% of incidents happened in the same location
- Recommended coaching and lift gate install reduced slip/trip/fall hazards by 99%

Wearables

Continuously monitor and capture an individual's motions, postures, work environment, etc. using devices worn by the employee throughout the workday.

Risk Applications

- Ergonomics Monitoring/Movements
- Forklift/Vehicle Driving
- Forceful Motion, Slip/Fall
- Temperature/Environmental Monitoring

Case Study – Window and door assembly plant

- Bending injuries with ongoing risk were identified
- Intervention with coaching, training and wearables haptic feedback
- 52% reduction in waist bends of over 60°
