

Let's generate a plan to improve safety and reduce risk.

Focused on our energy customers.

Your risk engineering consultant can provide the dedicated attention you deserve. Since no companies are exactly alike, your service plan will be created with your input and custom-designed to fit your business's needs.

Helping your business improve safety and reduce losses.

The energy industry has its share of hazardous equipment and dangerous processes – from upstream and midstream oil and gas operations involving hazardous atmospheres to renewable energy project construction and management. Even under these treacherous conditions, it's possible to perform energy work safely and with a minimum of accidents and injuries. What's needed is an understanding of the risks involved and the knowledge of appropriate, realistic solutions to prevent or control the hazards. This is just what we deliver through our highly skilled risk engineering consultants and services tailored specifically for the energy industry.

Committed to energy.

We've been writing energy companies of all sizes for many years – so we understand your industry. As your business insurance provider, we share your desire to control costs, but we are also committed to helping your business improve safety and reduce losses. That's why we're staffed with energy specialists across the country who provide consultative service to businesses like yours.

Delivering experience, knowledge and focus.

Many of our risk engineering consultants have worked on energy sites as safety directors or risk managers and in other capacities. This practical experience, combined with a dedicated focus on the energy industry and extensive training – including H2S Clear – makes our risk engineering consultants uniquely qualified to advise you about safety and injury prevention.

Tailoring service plans to your needs.

As an outside observer, your risk engineering consultant brings a fresh perspective to your energy projects. Together with you, we'll develop a service plan that reflects your specific needs and preferences. We start by asking you what safety risks are most critical to your operations and then develop a plan to improve safety for those risks.

Just a few of the risk engineering services that can benefit your business:

- **Job site surveys** – At your existing job sites, we'll identify hazardous conditions and offer cost-effective, practical solutions to correct them.
- **Loss analysis** – We can analyze your losses, identify what's causing them, and recommend ways to reduce accidents and lower your losses.
- **Auto and fleet safety** –
 - » **Driver selection** – We assist customers in promoting safe driving to lower your exposure to risk with a formal driver review process, which includes providing guidance on Motor Vehicle Record (MVR) checks.
 - » **Driver training** – Our unique driver training solutions assist our customers in training drivers on how to prevent collisions with defensive driving practices.
 - » **Driver supervision** – The Hartford has an incentive program for use of fleet telematic safety devices. Our FleetAhead program integrates technology and risk management services to help our energy insureds reduce collisions, increase productivity and reduce the cost of fleet operations.
- **Industrial Hygiene Lab, AIHA-accredited¹** – Our industrial hygiene specialists will consult with you to assess your operations and help you identify, quantify, understand and control hazardous conditions, such as excessive noise and airborne contaminants.
- **Industrial ergonomics** – Our risk engineering consultants and ergonomists work together to help our energy insureds target exposures and develop the controls needed to mitigate risks and reduce the potential for musculoskeletal disorders with our tailored, innovative ergonomics approach.

Services continued

- **Sustainable energy technology risk mitigation** – We can assist our insureds to better understand inherent risk and potential solutions to reduce the likelihood and severity of an incident associated with sustainable energy. This includes battery energy storage systems, lithium-ion batteries and photovoltaic systems.
- **Business continuity and emergency preparedness** – We can help enhance your capability to keep employees safe and continue the delivery of products or services following a disruptive incident.
- **Injury prevention services** – Proactive solutions such as nurse triage programs are focused on improving overall health and well-being and tailored to the unique needs of your business.
- **Contractual risk transfer** – Our risk engineering consultants are familiar with various types of contracts within the energy industry and can advise on best practices for risk transfer, reducing your general liability exposures.
- **Speakers for safety meetings** – Our highly skilled professionals are happy to speak at your safety committee meetings on a variety of loss prevention topics that either you or we suggest. Topics can be geared to your employees, supervisors, subcontractors or other individuals.
- **Library of resource materials** – We offer access to a vast library of materials including best practice bulletins, technical information papers (TIPS), inspection checklists, training presentations, sample safety and health programs and written program guides. Register or log in to [My Account](#) to access the resources free of charge.
